- **Mobile data collection**
- **Platform for peer consultation**
- **Clinical decision-making**
- **Community eHealth package**

- **Scale and quality assurance across countries**

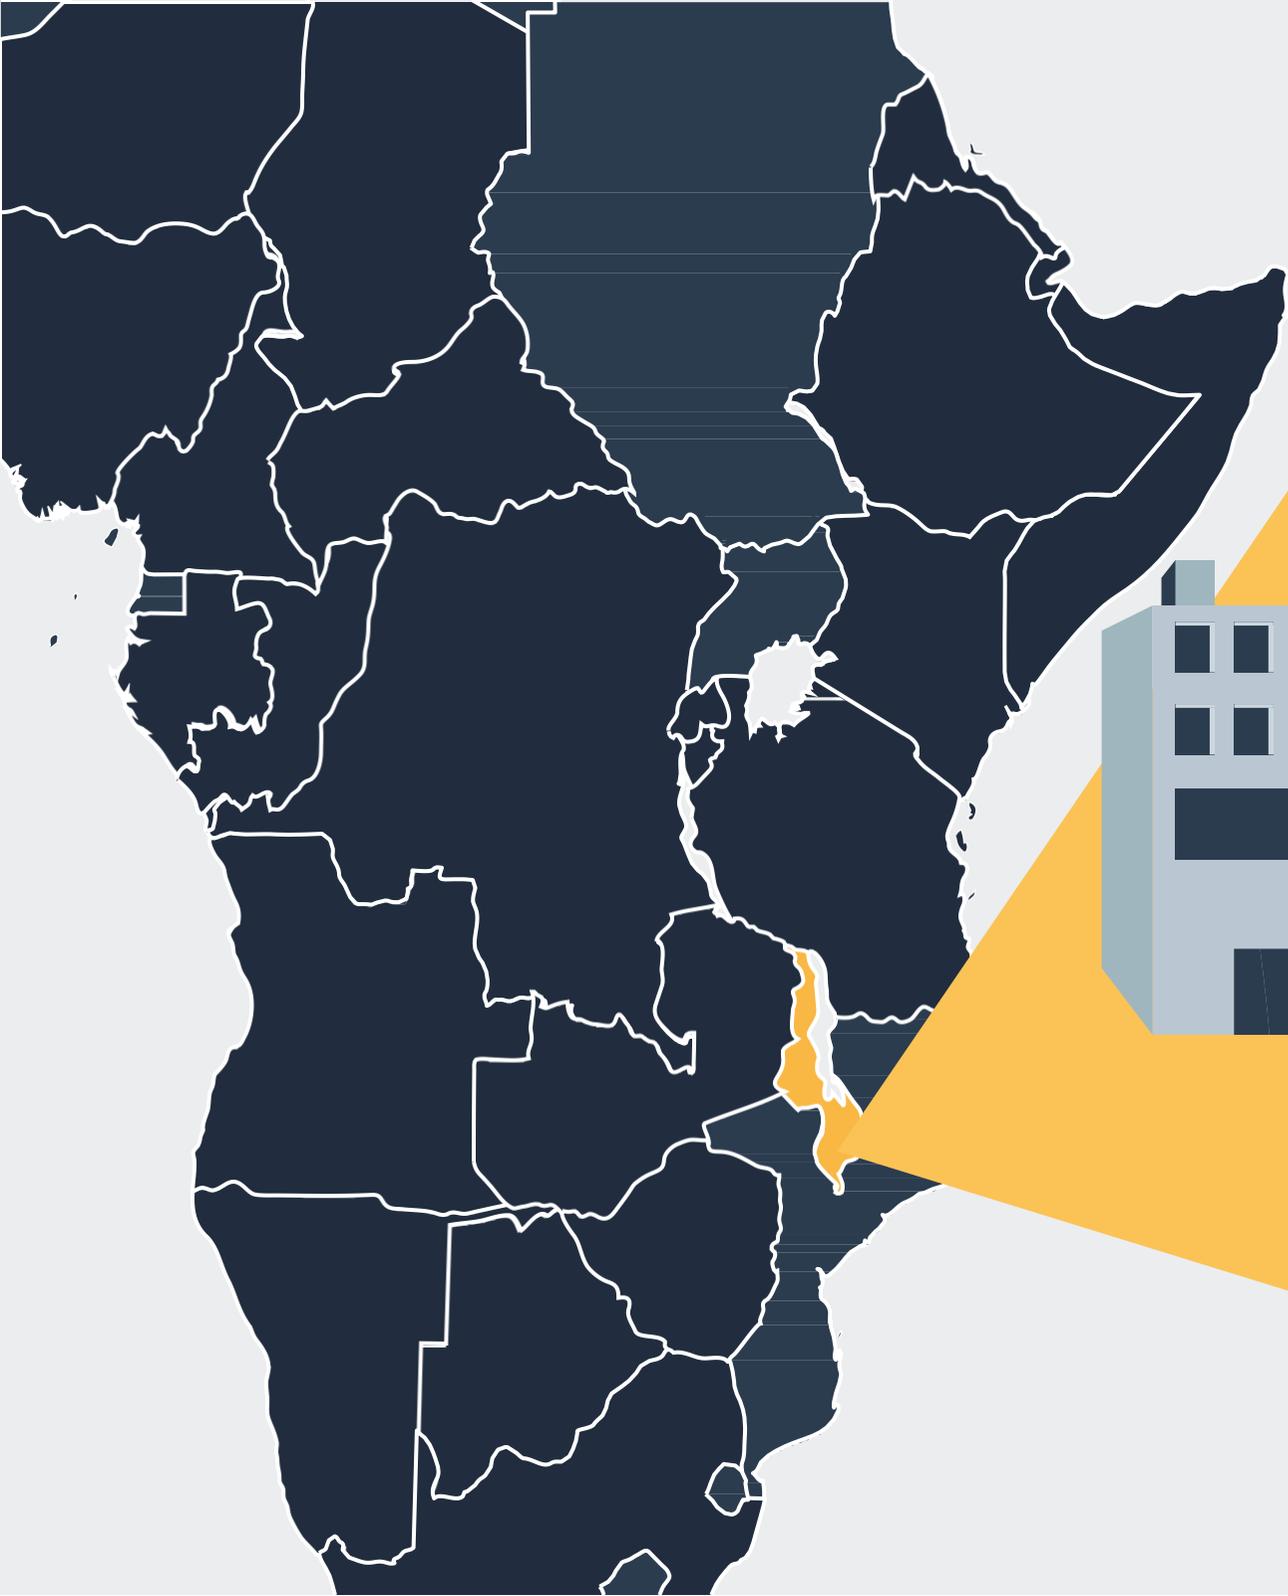

- **Scale and quality assurance across countries**
- **Driven by responsiveness to individual market needs**

How do we achieve scale and quality assurance across countries while being driven by responsiveness to individual markets' needs?

**Nkhoma Hospital,
Malawi**

Nkhoma Hospital, Malawi

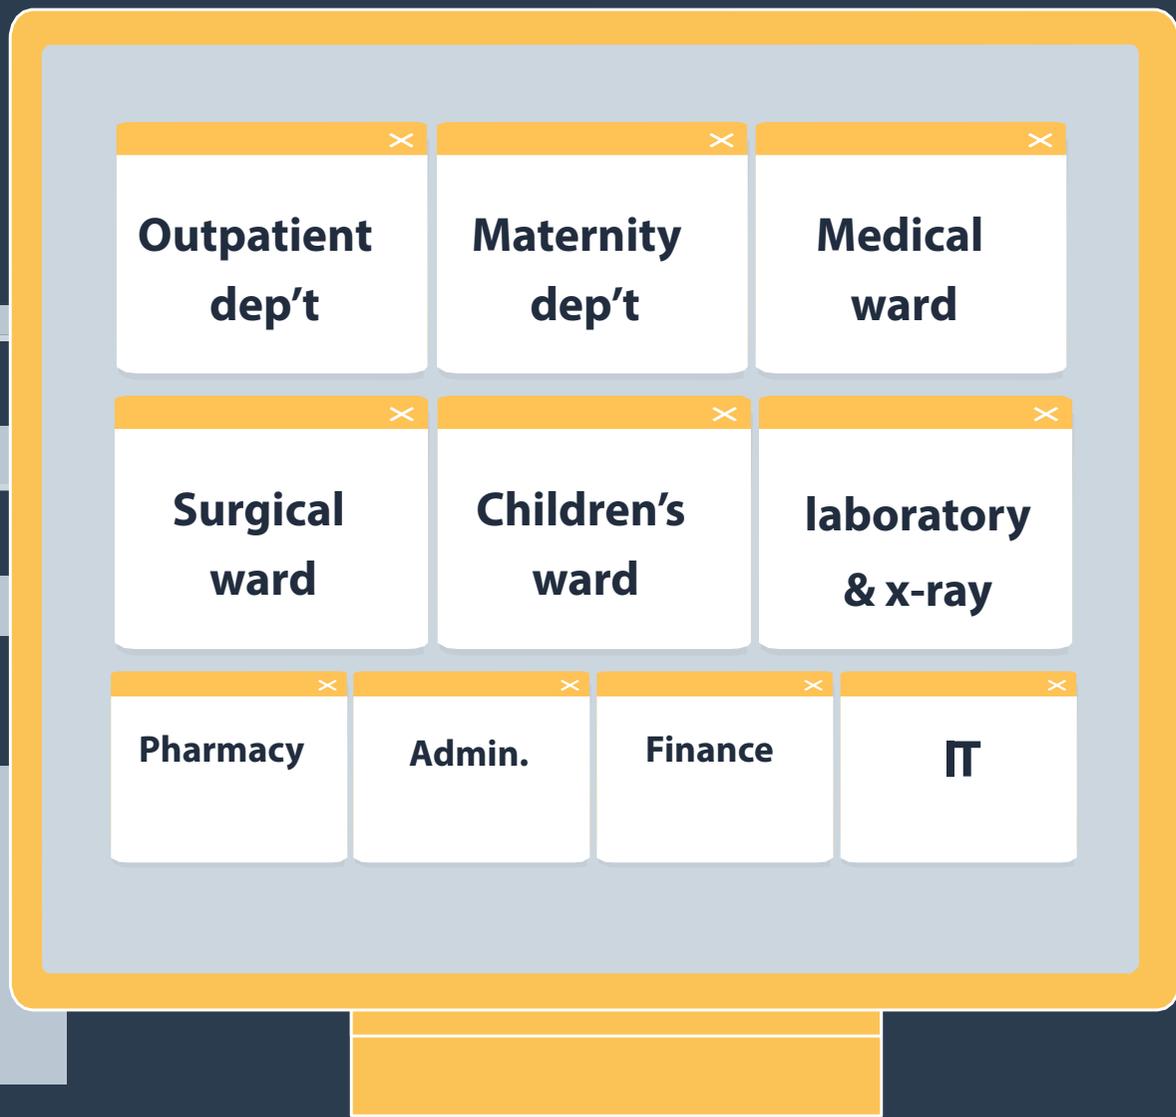

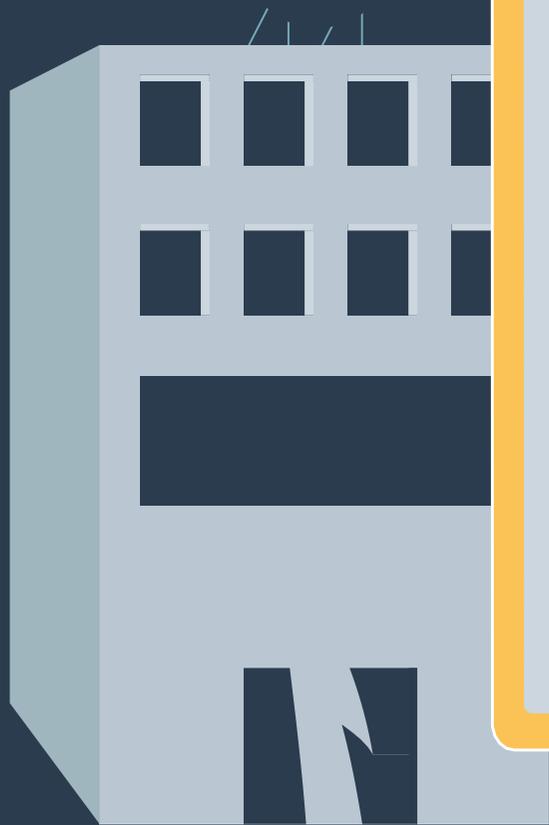

- **220 bed not for profit facility**
- **serves rural catchment population of 65,000 ppl**
- **referral hospital for 10 rural health centres, serving 550,000+ ppl**
- **60km south east of Lilongwe**

KEY CHALLENGES

lack of accurate and timely data

- **manual information recording processes** prone to human error, leading to inadequate patient records, wasteful duplication of activities and processes, and lack of proper patient billing systems.
- **lack of systems for managing financial transactions and data**, hindering effective accounting, strategic decision-making and prioritisation
- **not able to accurately supervise patient billing**, negotiate state reimbursement and account for revenue collected in the course of the patient journey

Outpatient dep't	Maternity dep't	Medical ward	
Surgical ward	Children's ward	laboratory & x-ray	
Pharmacy	Admin.	Finance	IT

**Nkhoma
Hospital,
Malawi**

2009

**Outpatient
dep't**

Installing 3 modules of AfyaPro:

- **patient registration,**
- **billing, and**
- **diagnosis & treatment**

2010

**Expanding
to:**

**Medical
ward**

**Surgical
ward**

**Children's
ward**

**Additionally installing AfyaPro's
reproductive and child health
(RCH) module**

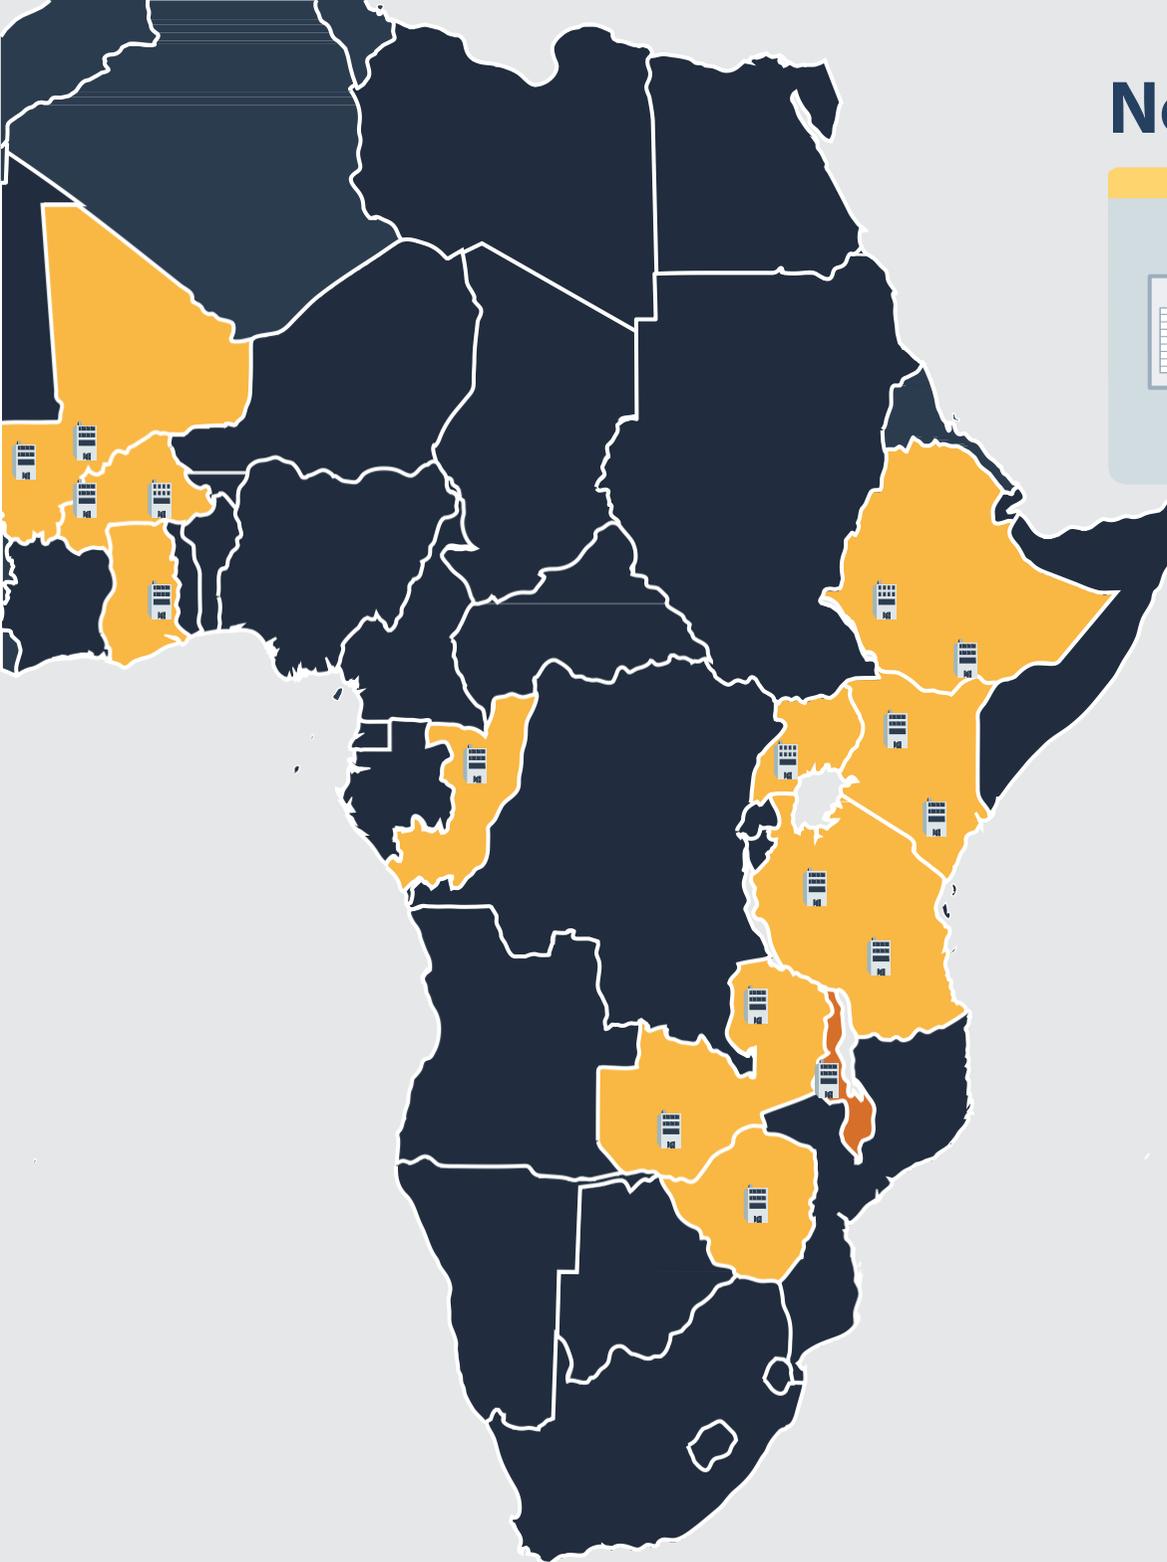

RESULTS

Since the implementation of the eHIS in 2009

- **More costs have been recovered per-patient,**
- **Fewer patients are being lost to billing**
- **Overall revenue has grown, even after adjusting for extraneous factors.**
- **Annual per patient revenue increased**
- **Qualitative data indicate that the system improved transparency, auditability and accountability of staff**

Not just in Malawi...

Tanzania: AfyaPro has been integrated in the daily operations of 20+ facilities including district hospitals and lower level health facilities. 15% increase in revenue after implementing AfyaPro

Zimbabwe: AfyaPro is the central system in a wider Results-based Financing solution financed by the World Bank and deployed at 6 district hospitals

Malawi: next to Nkhoma, the system is currently being deployed in another main hospital (Montfort Hospital) and 10 rural health facilities.

These developments have led to several challenges in sustaining the quality & value of the solutions for clients over time....

**Software
development**

...We returned to investing directly in programmers associated with the various solutions, but needed to find a way to create co-ownership of the solutions, ensure quality management across the different deployments and provide financially sustainable implementation support...

What's needed:

- **co-ownership of the solutions,**
- **ensure quality management across the different deployments, and**
- **provide financially sustainable implementation support**
